Working Group
Integrated Control in Protected Crops, Temperate Climate

Bruno Gobin
convenor 2014-
Aim and history of the working Group

WG aims to stimulate the worldwide use of biological and integrated pest management in greenhouse production in the temperate climate through coordinated fundamental and applied research as well as advisory and public relations work.

Convenor Bruno Gobin
Liaison Gerben Messelink
Recent Activities and Scientific Topics

• New and emerging pests and beneficials
• Innovative Strategies that Enhance Biological Control and Tackle Application Challenges
• Influence of the Environment on IPM
• Supplemental Food
• Microbes in the Greenhouse
• Induced resistance: developing new tools for pest management
• Increase Grower Interaction
• Increase exchange Mediterranean
• IP Guidelines covered crops
Brest 2020 (August 31st – Sept 3rd)

• Local organizers: Astredhor and Ctifl
• Co-convenors: Carmelo Rapisarda, Bruno Gobin
• Attract students
• Convenor election
• Joined meeting Mediterranean and Tempereate Groups

• The prospective themes are:
  – New natural enemies, new pests
  – Food supplementation
  – Role of the plant in IPM (induced and/or genetic plant resistance, plant nutrition)
  – Research impact: adoption rate of biocontrol (% growers using, why, why not, economic approaches)
  – Microbes (biopesticides, biostimulants)
